Course Description

The purpose of this course is to expose DEOHS students (and faculty and staff) to a broad range of environmental and occupational health research, practice, and policy issues. The students will attend a weekly seminar that is presented by an invited speaker in a field related to environmental and occupational health sciences. Speakers will usually be in-person, and the most effective participation by attendees will be in person.

Students are encouraged to attend in person, as not all presentations may be recorded (at speaker's discretion).
